ABSTRACT

The paper focuses on the developments of telephone network, and the internet as the cost effective solution telephone network. In order to justify the internet as the telephone network of the world, the circuit switched and the packet switched telephone networks were compared based on several parameters such as the benefits, cost and overall aim of ingenious innovations. The internet telephony was in many ways proven cheaper, and its fast growth rate indicates future dominance.

Keywords: Internet, circuit switch, Packet switch, Telephone Network, VoIP.
